Speech Title

HUE CENTRAL HOSPITAL: GLOBAL COOPERATION - SUSTAINABLE DEVELOPMENT

AI in Medicine

Future of Healthcare by AI

Abstract(200 words) :

In the context of globalization, Hue Central Hospital has identified international medical cooperation as a strategic pillar to enhance the quality of treatment and training capacity.

Development: The hospital has established partnerships with more than 20 countries and has become a trusted partner of leading international organizations. It has diversified forms of cooperation, covering almost all professional fields. Thanks to this, the hospital has mastered many advanced techniques, enhanced professional capacity, developed human resources, and leveraged international financial support for the modernization of infrastructure and equipment. It has become a reliable destination for internships and research for hundreds of international students and experts. Special attention has been given to cooperation with countries in the region through technology transfer, short-term training, and sponsorship of training expenses.

Vision: The hospital aims to standardize training programs according to international standards, strengthen external communications, develop medical tourism, expand strategic partnerships and multilateral cooperation. Its ultimate goal is to become a specialized medical center with regional influence.
